DEPARTMENT OF COMPUTER SCIENCE

VILLA MARIE DEGREE COLLEGE FOR WOMEN

(Affiliated to Osmania University) Somajiguda,

Hyderabad – 500082

2022-2025

Acknowledgement

We would like to place on record our deep sense of gratitude to Mrs. S. Gayathri, HOD Department of Computer Science, Villa Marie Degree College for Women, Hyderabad, for her stimulating guidance, continuous encouragement and supervision through the course of the present work.

We also wish to extend our thanks to the Department Lecturers and other colleagues for attending our seminars and for the insightful comments and constructive suggestions to improve the quality of this project work.

We are extremely thankful to Mrs. Revati Devi Mathur, Principal of Villa Marie Degree College for Women, Hyderabad, for providing us her valuable suggestions.

We are extremely thankful to Ms. Chinnamma, Secretary of Villa Marie Degree College for Women and Dr. Philomena, Founder and Director of Villa Marie Degree College for Women, Hyderabad, for providing us infrastructural facilities to work in, without which this work would not have been possible.

Signature of the Students

1. Meher Nigeban (123822467017)
2. Ruqsar Begum (123822467023)
3. Shehla Ahmed (123822467027)
4. T.Sanjana (123822467031)

Declaration

We hereby declare that this project report entitled "Nourishing Lives-an attempt to touch each life" submitted by us to the Department of Computer Science, Osmania University, Hyderabad, is a bonafide work undertaken by us and it is not submitted to any other university or institution for the award of any degree/diploma/certificate or published any time before.

Signature of the Students

1. Meher Nigeban (123822467017)

2. Ruqsar Begum (123822467023)

3. Shehla Ahmed (123822467027)

ABSTRACT

Abstract

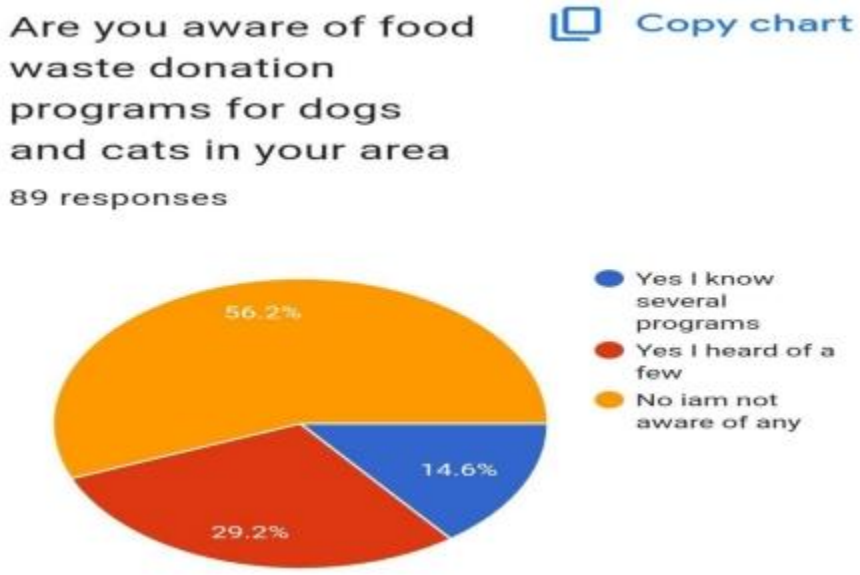
The food waste management system for animals aims to reduce food waste by collecting and reusing leftover food to feed animals in a safe and efficient manner. We includes the collection of food waste from households, restaurants, and other sources. The waste is then sorted to remove harmful items, processed to ensure it is safe for animal consumption, and distributed to farms, shelters, or animal feeding centers. Our website serves as a single platform that connects users (food waste donors) with us, and we further connect them to relevant organizations like animal shelters, farms, or feed processors. This system not only minimizes environmental pollution but also provides a sustainable and cost-effective food source for animals, promoting better waste management practices.

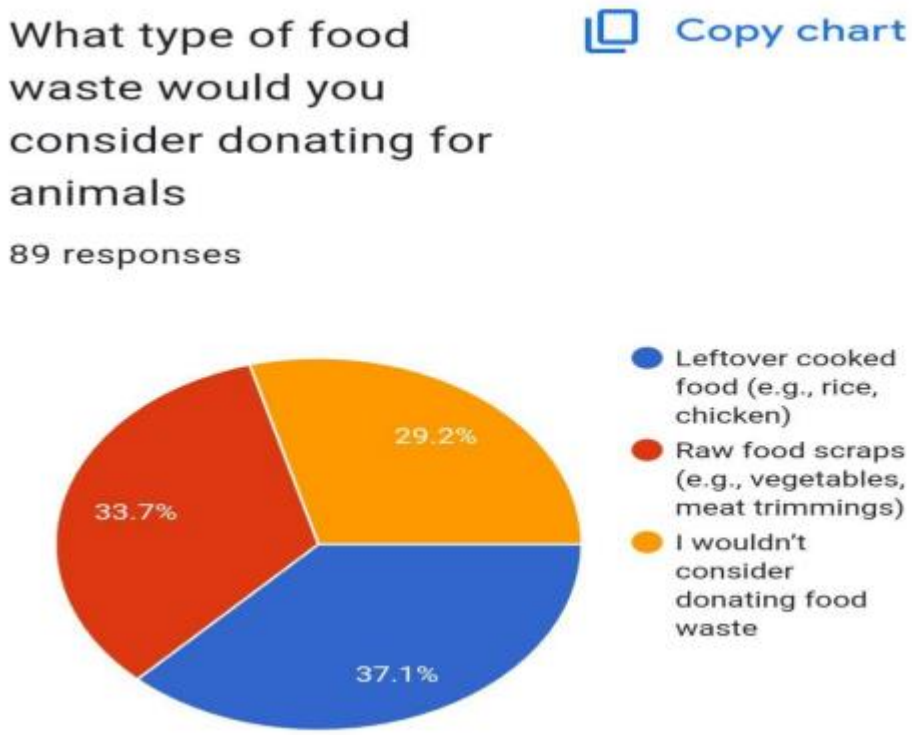
System Analysis

Study of Existing System

Existing System Currently, there are several organizations and platforms addressing food waste management, mostly focusing on human consumption but indirectly benefiting animals:
• Sodexo India & Feeding India Partnership: Redistributes surplus food to underserved communities but indirectly benefits animals by reducing overall waste.
• DONATEinKIND: Connects food donors to NGOs and food banks but lacks an animal-specific focus.
• Wastelink: Processes surplus food into animal feed but primarily operates on a business-model.
• Feeding America: Focuses on surplus food redistribution across the U.S., emphasizing human welfare, with little attention to animal feed management.
• Robin Hood Army :A volunteer-based organization redistributing surplus food to the needy, with no provisions for animal welfare.
• Poultry Feed Innovations: Limited initiatives exist to turn leftover grains and bread into poultry feed, which are underutilized.
• Agricultural Waste Projects: Some initiatives process agricultural byproducts into animal feed, but scalability remains a challenge.
• International Efforts (e.g., Too Good To Go): Primarily focus on reducing food waste but fail to incorporate animal welfare in their frameworks.
• Research Projects: Universities and research institutions propose models for food waste-to animal feed conversion but lack practical implementation. Despite these efforts, gaps persist in addressing animal-specific needs and optimizing waste management for animal welfare.

Literary Survey

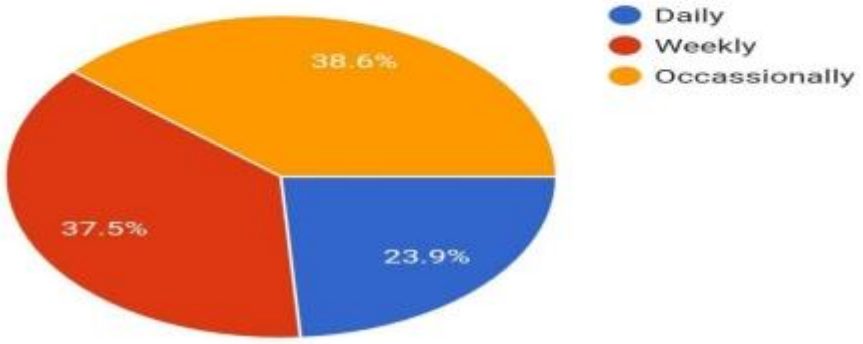




How often would you be willing to donate food waste for dogs and cats

88 responses

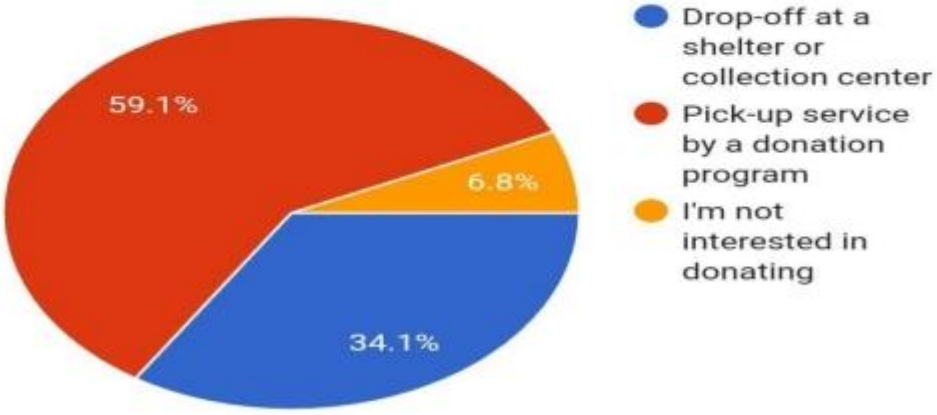
Copy chart



How would you prefer to donate food waste

88 responses

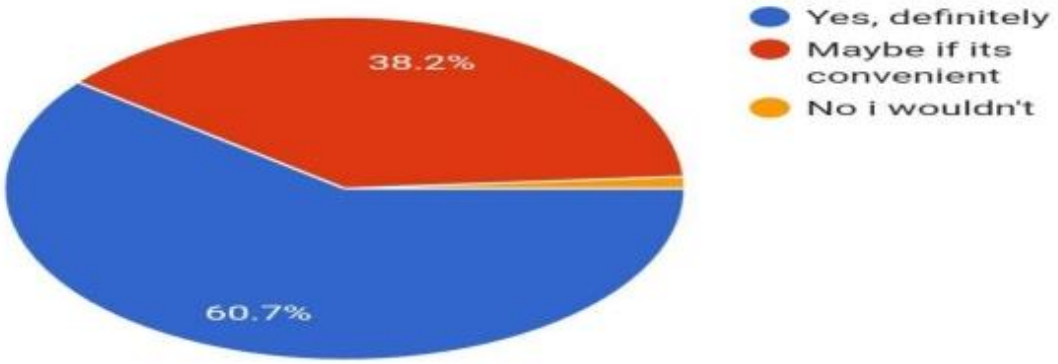
Copy chart



Would you participate in a food waste donation program if it was available nearby

Copy chart

89 responses



Interpretation

The survey highlights the need of a platform where people can donate the leftovers and make donations towards animals .By making it easy for the people to donate, the website appears to be a go to solution for animal lovers around the country .with the option of the donation being picked from home and also having the options to donate the kind of food people want to the website offers a wide range of options for people to work towards the cause of touching lives.

Problem Definition

Problem Definition Existing food waste management systems face several limitations that hinder their effectiveness, especially in addressing animal needs:

• Human-Centric Models: Most systems cater exclusively to human consumption, sidelining animal welfare.

• Logistical Challenges: Inefficient collection and distribution often lead to delays and spoilage of food waste.

• Lack of Awareness: Many individuals and businesses are unaware of how to repurpose food waste for animals.

• Inadequate Infrastructure: Insufficient facilities for processing food waste into animal feed.

• High Costs: Current systems have high operational costs, making them unsustainable for small-scale donors.

• Waste Segregation Issues: Difficulty in sorting food waste suitable for animal feed versus compost or disposal.

• Post-Consumer Waste Neglect: Minimal efforts are made to utilize food waste generated by households.

• Regulatory Challenges: Lack of clear guidelines for using processed food waste as animal feed.

• Environmental Impact: Food waste in landfills emits methane, contributing to climate change, which existing systems fail to address adequately.

• Limited Collaboration: Lack of partnerships between food businesses, charities, and animal welfare organizations, preventing more efficient redistribution of food waste.

• Health and Safety Concerns: Fear of food borne illnesses or contamination may deter the use of food waste for animal consumption, despite potential benefits.

• Public Perception: Negative perceptions of food waste reuse, whether for animals or composting, hinder participation from the public and businesses alike.

• Seasonal Variability: Fluctuating availability of certain types of food waste depending on the season, complicating the consistent feed supply for animals. Addressing these challenges is critical to creating a more effective and inclusive food waste management system.

Proposed System

Proposed System The proposed system is designed to bridge the gap between food waste and animal welfare by introducing advanced solutions:

• Centralized Platform for Users: Our website serves as a single platform that connects users (food waste donors) with us, and we further connect them to relevant organizations like animal shelters, farms, or feed processors.

• Data Collection and Management: The system collects data from users, including details of donors (e.g., restaurants, households) and organizations (e.g., shelters, farms). This data is stored securely in database.

• HTML and CSS Integration: The website is built using HTML and CSS to ensure a user-friendly, interactive, and visually appealing interface that simplifies the donor experience.

• Database Storage and Cleansing: All collected data is stored in a robust database (using SQL). The data is cleansed, verified, and organized before proceeding with further actions like allocation or distribution

• Efficient Data Processing: The backend system processes and analyzes the data to ensure that the donations are directed to organizations with the most immediate needs.

• User Accounts and History: Donors and organizations can create accounts to track their contributions or received donations, promoting transparency and engagement.

• Feedback Mechanism: Provides a feedback loop where users and organizations can review the process, ensuring continuous improvement.

• Automated Notifications: Sends reminders/Mails and alerts to users about donation schedules, updates on food collection, or status of their donations.

• Scalability: Designed to accommodate an increasing number of users and organizations as the platform grows, ensuring long-term sustainability

Objective of the System Proposed

The primary objectives of this project are to:

• Create a seamless digital platform connecting food waste generators with animal feed producers.

• Develop scalable solutions adaptable to diverse regions and community needs.

• Incorporate advanced technologies like geolocation and tracking for efficient logistics.

• Ensure proper classification and processing of food waste to meet the dietary needs of animals.

• Minimize food waste's environmental impact by diverting it from landfills to productive use.

• Engage with local communities and organizations for better outreach and collaboration.

• Establish long-term sustainability through circular economy practices

Requirement Specification

Requirement Specification
System Specification:

Hardware Specification

Processor: 1 GHz or faster

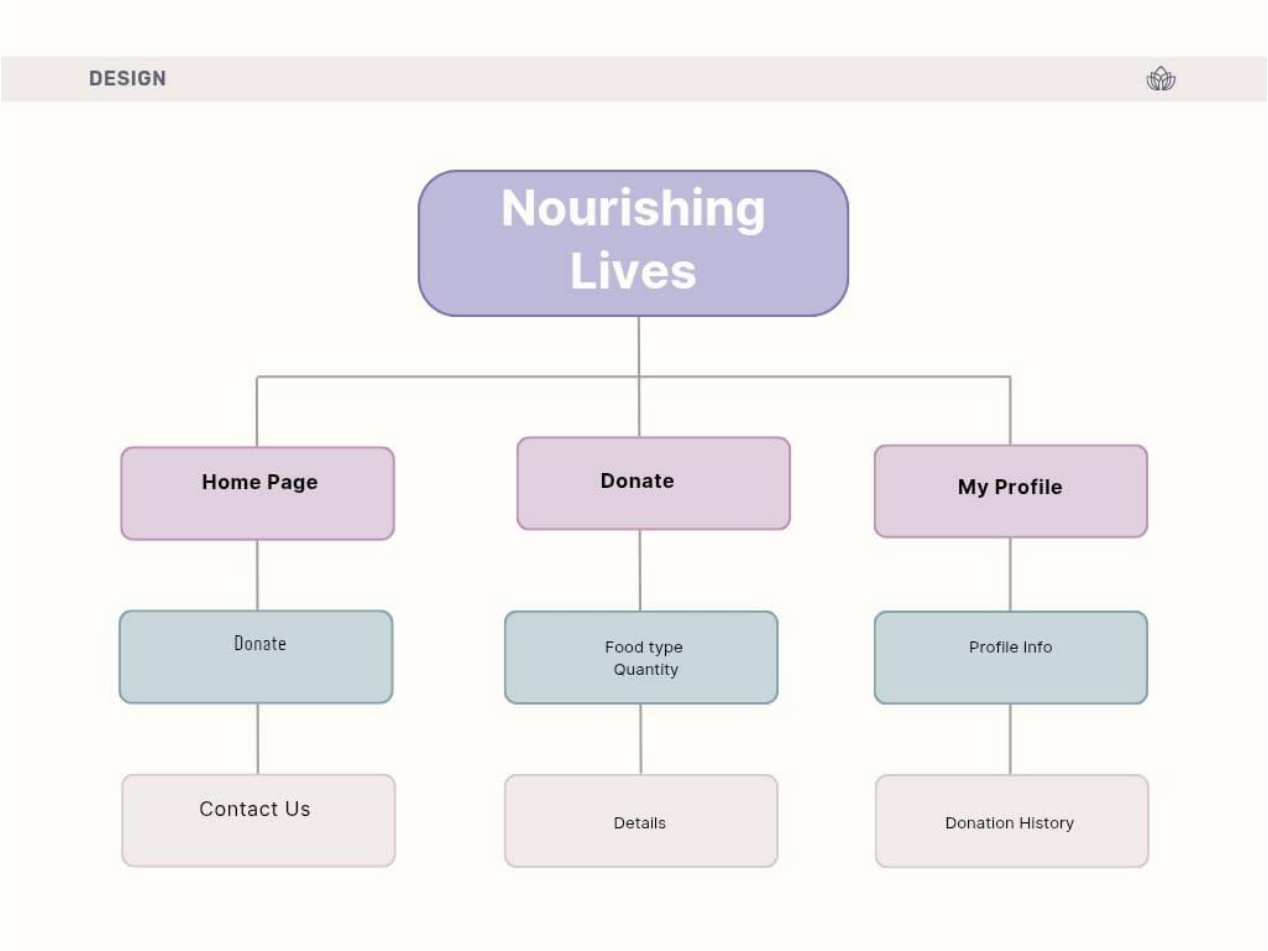
- RAM: 2 GB minimum, 4 GB recommended
- Disk Space: 100 MB for application, plus space for database growth
- Display: 1024x768 resolution or higher

Software Specification

- Operating System: Windows 7/8/10/11, macOS 10.13+, or Linux
- Python 3.6 or higher (3.8+ recommended)
- Modern web browser (Chrome, Firefox, Edge, Safari)
- Internet connection for initial setup only (to download dependencies)
- TECHNOLOGY STACK
- Backend Technologies
- 1. Python 3.8: Core programming language
- 2. Flask 2.3.3: Web framework for handling HTTP requests and responses
- 3. SQLite 3: Local database engine (built into Python)
- 4. Werkzeug 2.3.7: WSGI utility library for web applications
- Used for password hashing and secure file uploads
- 5. Gunicorn 23.0.0: WSGI HTTP Server for production deployment
- Frontend Technologies
- 1. HTML5: Markup language for website structure
- 2. CSS3: Styling language for appearance
- 3. Bootstrap 5: CSS framework for responsive design
- - Loaded from CDN: cdn.replit.com/agent/bootstrap-agent-dark-theme.min.css
- 4. JavaScript (ES6+): Programming language for client-side functionality
- 5. Font Awesome 6.4.0: Icon library for UI elements
- - Loaded from CDN: cdnjs.cloudflare.com/ajax/libs/font-awesome/6.4.0/css/all.min.css

Design

Design



Explanation:

- The user has to register/login from the login page
- The donation page consists a list of items the user can choose from, the quantity ,the time and location
- Then the user will have to submit the donation form.
- The donation will be submitted and a volunteer will pick it up from the user as per the time and location specified.
- The user can also check his donation history and track his donation from the 'My Profile' page.

Conclusion

The Food Waste Management System for Animals is a web-based platform that connects food donors with animal shelters to reduce food waste and support animal welfare. Using a frontend and backend the system allows donors to register, submit food donations and help the animals. It is a website where we made a n attempt to touch each life using the waste at our places.

Future Enhancement:

1. Live Updates Page

Food Pickup & Delivery Status:

Show a live tracking system where donors can see the progress (e.g., "Food Picked Up," "On the Way," "Delivered").

Use Google Maps API to display the location of the delivery in real time.

Real-Time Notifications:

Send email or SMS alerts when food is picked up, in transit, and delivered.

Use push notifications if you plan to add a mobile-friendly version.

2. Live Pictures of Animals Being Fed

Automated Photo Uploads:

Volunteers or staff can take photos of the animals eating and upload them instantly.

Use a gallery or carousel feature on the website to display the latest photos.

Timestamp & Donor Acknowledgment:

Show the date & time of the feeding.

(Optional) Mention the donor’s name (if they agree to it).
